### A PAIR OF 14CT GOLD OPAL DROP

**EARRINGS** The pair of elegant water opal and 14ct yellow drop gold earrings designed in a linear style. Unlike other precious opals, which typically possess an opalescent body colour, often milky in appearance, water opal is characterised as being transparent with an internal play of colour, rather than seemingly on the surface. Unlike crystals, which have a regular repeating pattern of atoms within alternative configurations, opal owes its structure to thousands of closely packed silicon spheres. The larger and more regular the spheres are, the more substantial the gap between the spheres is for light to diffract and interfere. Only large vacancies allow larger (red and orange) wavelengths to pass through. Therefore, these are the rarer and more desirable colours. A visible hallmark, assayed in London, NJ sponsor mark, stamped 375, unreadable date stamp, drop length approximately 1.5cm, gross weight 2.03g. Good condition, wear commensurate with age. All of the opals are in good condition and are well secured by a rub-over setting.
